

SIAP S.p.A. is aware that any industrial activity must be sustainable and compatible with the environment and must take place by protecting employees' health and safety in order to obtain full satisfaction from all the parties involved (public authorities, customers, owners, workers, communities, etc.).

Senior Management through the Environmental and Safety Policy is committed to:

- ensure that its activities comply with environmental health and safety legal obligations and local regulations at work;
- ensure the integration of the Environmental and Safety Management System requirements in the organization's business processes;
- ensure compliance of its Environmental Management System with UNI EN ISO 14001: 2015 reference standard and to pursue environmental and safety performances continuous improvement with the commitment to satisfy the interests of external and internal parties;
- to prevent pollution by favoring source reduction rather than the downstream effects abatement, through careful activities management and by implementing every organizational, operational, technological effort;
- to reduce injuries at workplace and prevent occupational illnesses through the risk assessment and by implementing appropriate preventive and protective measures;
- to identify objectives to improve environment and safety performance, to define programs to achieve objectives, to monitor the outcome and to communicate results in the management review.

Strategic lines that SIAP S.p.A. promotes in environmental, health and safety field are:

- Environmental, Health and Safety Management System effectiveness assessment and monitoring about pursuing their goals;
- to reduce environmental impact of its industrial activities as resources usage, air emissions, waste production, wastewater discharge, dangerous substances usage, noise emissions and energy usage;
- business processes optimization planning preventive control measures, using technologies that minimize health, safety and environmental risks.
- to ensure employees, collaborators and all stakeholders participation in the Environmental Health and Safety Management System implementation and improvement, through training communication and accountability on the effects of carried out activities;
- to reinforce awareness and responsibility of everyone on the environmental, health and safety issues at workplace through communication and consultation;

- to inform suppliers regarding environmental and safety impacts that supplied products and services may have;
- contractors sensitization, to comply with the requirements to protect the environment and workers' safety;
- support for other management roles in order to demonstrate leadership and how they apply to their respective responsibility areas;

Every year top Management identifies objectives that are consistent with the company's guidelines, context and the activities necessary to achieve them, undertakes to verify resources adequacy and the means used to guarantee the objectives achievement and full corporate policies implementation. Top Management requires all the employees to participate in the Environmental and Safety Management System continuous improvement so that it become effective and efficient, recommends the systematic procedures application, to report any inadequacies and supports any proposal for improvement.

The environment, the health and safety of workers are crucial needs for the company and any action aimed to protect them does not constitute a burden, but a precious investment for the future.
